Dental Therapy is NOT a Proven or Effective Solution

THE CLAIM:

Dental therapy has been proven to work in a dozen other states.

THE REALITY:

Minnesota is the only state with a statewide dental therapy program in practice.

In Minnesota, low-income families continue to struggle to get care, and legislators are still working to effectively address the state's access to dental care problem. The dozen other states have been unable to establish a program with licensed dental therapists practicing statewide, years after passing dental therapy legislation.

Florida needs comprehensive, ready-to-implement solutions to help Florida's 14,000+ dentists and 30,000+ dental team members serve our rural and underserved communities with the highest standard of care.
